

After a summer of heatwaves, drought and wildfires, this must be a climate election...

Oil and gas companies create **26%** of carbon pollution in Canada...

More than all cars, trucks, planes, trains and boats....

COMBINED.

Last month, the UN Secretary General called the latest climate report a “CODE RED” for humanity...

He said humanity must sound a “DEATH KNELL” for fossil fuels...
Before they DESTROY OUR PLANET.

With that in mind... ask your candidates this election:

- What’s your plan to end the extraction and use of fossil fuels in Canada over the next few decades?
- How will your government support oil and gas workers and communities whose main industry cannot exist in 30 years?
- Do you support building new fossil fuel infrastructure that will last for decades like the TMX pipeline or LNG Canada?
